Anomurans of the Aegean Coasts of Turkey and Reported Species from Turkish Seas

Cengiz KOÇAK, Tuncer KATAĞAN, Ahmet KOCATAŞ
Faculty of Fisheries, Ege University, Bornova 35100-İzmir - TURKEY

Abstract: The Anomurans of the Aegean coasts of Turkey were studied between 1987 and 1997, in the region from the Gulf of Saros in the north to Marmaris in south at 17 stations; the 811 specimens obtained were identified as belonging to 28 species. Moreover, all of the early studies were reviewed on the Anomuran fauna of Turkish coasts and it was determined that 3 species were reported from the Black Sea coasts of Turkey, 20 species from the Sea of Marmara, 27 species from the Aegean coasts of Turkey and 17 species from the Turkish coasts of the Mediterranean Sea. From the 28 species determined during this study, 5 species (Galathea nexa, Galathea cenarroi, Munida tenuimana, Pagurus chevreuxi and Paguristes syrtensis) are new records for the Aegean coasts of Turkey, and 3 species (P. chevreuxi, P. syrtensis, and G. cenarroi) are new records for the Turkish coasts.

Key Words: Arthropoda, Anomura, Crustacea, Decapoda

Introduction

Anomurans belong to the crustacean decapod infra-order Anomura. They form a significant part of the marine ecosystem because of their body shapes, symbiotic relationships (1), significance on the benthic biomass (2) and activities in the food chain (3,4,5,6).

In the research area, which is the Aegean coasts of Turkey, the first study on the Anomurans was carried out by Geldiay and Kocataş (7), who reported 18 species from the coastal strip between Dikili and Bodrum. In a later study by Kocataş (8), 25 Anomuran species from the Aegean coasts were included in the list of Decapod species of the Turkish Seas. Two species were first reported from the bathyal zones of the same area (9). Thus, the number of Anomuran species from the Aegean coasts of Turkey increased to 27.

Although investigations carried out along the Aegean coasts are very recent, records of the Anomurans of Turkish coasts are rather old. In the earliest investigations, which are generally on the decapods, 14 anomuran species were reported from the Dardanelles, the Sea of Marmara and the Mediterranean Sea coasts of Turkey. Then 9 species were reported from the Bosphorus and the Sea of Marmara (13), 11 species from the Black Sea, the Sea of Marmara and the Mediterranean Sea coasts of Turkey (14), 25 species from Turkish coasts (8), 3 species from the Sea of Marmara (15) and 2 species from the Turkish Black Sea coasts (16). Consequently there were 32 Anomuran species known from the Turkish coasts. From the 28 species determined during the study period, 5 species (G. nexa, G. cenarroi,
Anomurans of the Aegean Coasts of Turkey and Reported Species from Turkish Seas

M. tenuimama, P. chevreuxi and P. syrtensis) are new records for the Aegean coasts of Turkey and 3 species (P. chevreuxi, P. syrtensis and G. cenarroi) are new for the Turkish coasts.

As mentioned above, the most important investigation on Anomurans of the Turkish coasts of Aegean was carried out by Geldiay and Kocataş (7). These researchers conducted their work based on limited samplings at 7 localities between Dikili and Bodrum, and principally at İzmir Bay. Thus, more samplings are targeted so as to enlarge the research area on the Aegean coasts of Turkey. In addition, all of the early studies have been reviewed with the aim of determining the distribution of Anomuran fauna and the species present on the Turkish coasts.

Materials and Methods

Anomuran specimens were collected at 17 sampling stations from the Aegean coasts of Turkey between 1987 and 1997 (Figure). The offshore samplings were carried out on board the R/V K.Piri Reis via bottom trawl, beam-trawl and dredge studies, whereas coastal samplings were performed either by diving or hand collection. A total of 79 sampling surveys were conducted. The taxonomical keys of Zariquey-Álvarez (19) and Noel (20) were used for identifying the specimens. Moreover, ERMS (18) are considered for variations in the nomenclature.

Results

A total of 79 sampling surveys were made at 17 sampling localities on the Turkish coasts of the Aegean (Figure) and 28 Anomuran species were identified from the region. The Diogenidae were represented by 6 species, the Paguridae by 10 species, the Galatheidae by 9 species and the Porcellanidae by 3 species. Five species (G. nexa, G. cenarroi, M. tenuimama, P. chevreuxi and P. syrtensis) are new records for the Aegean coasts of Turkey, and three species (P. chevreuxi, P. syrtensis and G. cenarroi) are new records for the Turkish coasts.

FAM: DIOGENIDAE

Paguristes eremita (Linné, 1767)

Material: St. 9 (2♂, 12.05.1991); St. 10 (35m., 26.10.1996, 1 ovigerous ♀; 5♂, 2♀, 38-65 m., 07.11.1997, 1 ovigerous ♀)

This species has been reported by Ostroumoff from the Marmara Sea as Pagurus maculatus (11), and also under the name Paguristes oculatus from the Aegean and Mediterranean coasts of Turkey (7).

Paguristes syrtensis Saint Laurent, 1971

Material: St. 9 (1♂, 12.05.1991); St. 10 (1♂, 48 m., 07.11.1997); St. 14 (1♂, 4 m., 23.07.1995)

This species has been recorded from the coasts of Tunisia (21), and is also known from the Mediterranean Sea between the coasts of North Africa and Southern of Italy (20).

P. syrtensis is recorded for the first time from Turkish waters.
Clibanarius erythropus (Latreille, 1818)

Material: St. 1 (1♀, 1♂, 1.5 m., 05.07.1995); St. 2 (2♂, 1♀, 05.07.1995); St. 6 (1♀, 2♂, 0-1 m., 27.09.1995); St. 8 (2♂, 1♂, 0-1 m., 07.07.1995); St. 9 (1♂, 18 m., 12.05.1991); St. 10 (1♀, 1♀, 0.5 m., 03.03.1994; 6♀, 7♂, 0-1.5 m., 07.07.1995); St. 9 (1♀, 18 m., 12.05.1991); St. 10 (1♀, 1♀, 0.5 m., 03.03.1994; 6♀, 7♂, 0-1.5 m., 07.07.1995); St. 12 (1♀, 1♂, 0-1.5 m., 22.06.1995); St. 13 (3♀, 4♂, 0-2 m., 14.06.1995); St. 16 (2♀, 1♂, 0-1.5 m., 20.07.1995).

This species has been reported by Ostroumoff (11) and Demir (13) as C. misanthropus from the Marmara Sea; it has also been reported by Geldiay and Kocataş (7) from the Turkish coasts of the Black Sea and the Mediterranean Sea.

Dardanus arrosor (Herbst, 1796)

Material: St. 1 (1♀, 1♂, 18-20 m., 09.06.1996); St. 16 (1♀, 1♀, 1♀, 01.07.1991)

This species has been reported from the Marmara Sea (13) under the name Pagurus striatus, and has also been reported by Geldiay and Kocataş (7) from the Aegean coast of Turkey.

Diogenes pugilator (Roux, 1829)

Material: St. 10 (1♀, 33 m., 03.07.1997)

This species has been reported by Colombo (10) and Ostroumoff (11) under the name D. varians from the Marmara Sea. It has also been reported by Demir (13) and Holthuis (14) from the same sea, by Holthuis (14) and Ateş (16) from the Black Sea coast of Turkey, by Geldiay and Kocataş (7) from the Aegean coast of Turkey and by Kocataş (8) from the Turkish coasts of the Mediterranean Sea.

Calcarius tubularis (Linne, 1767)

Material: St. 9 (1♀, 1♂, 1.5 m., 05.07.1995, 1 ovigerous ♀)

This species has been recorded by Holthuis (14) under the name C. ornatus from the Turkish coast of the Mediterranean Sea, and by Kocataş (8) from the Aegean coast of Turkey.

FAM: PAGURIDAE

Cestopagurus timidus (Roux, 1830)

Material: St. 1 (6♀, 2♂, 0-2 m., 05.07.1995, 3 ovigerous ♀); St. 6 (4♀, 0-2 m., 07.07.1995); St. 7 (12♀, 4♂, 0-4 m., 06.07.1995); St. 8 (4♂, 1♀, 1♀, 0.5 m., 07.07.1995); St. 9 (3♀, 18.06.1991); St. 10 (1♀, 1♂, 0.5 m., 03.03.1994); 6♀, 0.5 m., 07.07.1995, 3 ovigerous ♀; 2♀, 1♂, 1-4 m., 20.09.1995, 1 ovigerous ♀; 5♀, 0-4 m., 08.05.1996); St. 11 (5♀, 1♀, 2♂, 0.5-2.5 m., 20.09.1995); St. 12 (1♀, 0-1 m., 22.06.1995); St. 13 (1♀, 2♂, 0-3.5 m., 14.06.1996); St. 15 (2♀, 6♂, 4.5 m., 20.07.1995); St. 16 (2♀, 0-1.5 m., 20.07.1995); St. 17 (1♂, 1 m., 21.07.1995).

This species, represented by Catapaguroides timidus, has been reported by Holthuis (14) from the Turkish coasts of the Mediterranean Sea, by Kocataş (8) from the Turkish coasts of the Aegean, and by Müller (15) from the coasts of the Marmara Sea.

Anapagurus bicorniger A. Milne Edwards and Bouvier, 1892

Material: St. 10 (1♀, 1♀, 35 m., 03.07.1997)

Anapagurus laevis (Bell, 1846)

Material: St. 3 (1♀, 7 m., 22.10.1997); St. 4 (1♀, 80 m., 03.09.1992); St. 9 (2♀, 2♂, 12.05.1991); St. 10 (1♂, 35 m., 24.10.1996); 7♀, 48 m., 07.11.1997, 2 ovigerous ♀)

Anapagurus petiti Dechancé and Forest, 1962

Material: St. 10 (2♀, 35 m., 24.10.1996; 1♀, 3 m., 03.07.1997, 1 ovigerous ♀)

Pagurus alatus Fabricius, 1775

Material: St. 1 (3♂, 630-680 m., 04.04.1989, 1 ovigerous ♀; 5♂, 630 m., 09.06.1996, 3 ovigerous ♀)

This species has been reported by Colombo (10) under the name Eupagurus angulatus from the Marmara Sea and by Adensamer (12) from the Mediterranean Sea coasts of Turkey. It has also been reported by Geldiay and Kocataş (7) from the Aegean coast of Turkey.

Pagurus prideaux Leach, 1815

Material: St. 4 (1♂, 110 m., 03.09.1992)

This species, as P. prideauxi, has been reported from the Aegean coast of Turkey (7).
**Pagurus chevreuxi** (Bouvier, 1896)

Material: St. 1 (1♀, 1♂, 1.5 m., 05.07.1995); St. 8 (1♀, 0.1 m., 07.07.1995); St. 9 (1♀, 2♂, 18.06.1991); St. 10 (1♀, 2♂, 0.5 m., 07.07.1995; 1♀, 0.1-1.5 m., 08.05.1996); St. 11 (2♀, 1♂, 0.5 m., 20.09.1995); St. 16 (2♀, 0.7 m., 20.07.1995)

This species is known between 1 and 25 m. in the Mediterranean Sea (20); it has also been reported by Koukouras et al. (17) from the Aegean coasts.

P. chevreuxi is recorded for the first time from the Turkish coasts.

**Pagurus anachoretus** Risso, 1827

Material: St. 1 (1♀, 4 m., 22.07.1996); St. 7 (1♀, 0.5-4 m., 06.07.1995); St. 9 (1♀, 1.5 m., 03.03.1994); St. 10 (2♀, 0.5 m., 07.07.1995, 1 ovigerous ♀); St. 15 (1♀, 4.5 m., 20.07.1995)

This species has been reported by Colombo (10) and Ostroumoff (11) under the name Eupagurus anachoretus from the Marmara Sea. It has also been recorded by Geldiay and Kocataş (7) from the Aegean coasts of Turkey.

**Pagurus cuanensis** Bell, 1846

Material: St. 9 (1♀, 18 m., 12.05.1991; 3♂Geldiay & Kocataş, 18.06.1991); St. 11 (1♀, 1♂Geldiay & Kocataş, 2.5 m., 20.09.1995)

This species has been reported by Colombo (10) and Ostroumoff (11) as Eupagurus lucasi from the Marmara Sea. It has also been recorded by Geldiay and Kocataş (7) from the Aegean coasts of Turkey.

**Pagurus forbesii** Bell, 1845

Material: St. 9 (3♀, 18 m., 12.05.1991); St. 10 (1♀, 30 m., 02.07.1997; 1♀, 2♂, 38-65 m., 07.11.1997); St. 11 (1♀, 2.5 m., 20.09.1995)

This species has been reported by Ostroumoff (11) from the Marmara Sea. It has also been reported by Kocataş (8) from the Turkish coasts of the Aegean Sea and the Mediterranean Sea.

FAM: GALATHEIDAE

**Galathea nexa** Embleton, 1834

Material: St. 6 (1♀, 40 m., 21.11.1990); St. 15 (4♀, 3♂, 55 m., 14.05.1990)

This species has been reported from the Marmara Sea (11), from the Turkish coasts of the Mediterranean Sea (22) and from the Aegean coasts (17).

G. nexa is recorded for the first time from the Turkish coasts of the Aegean.

**Galathea dispersa** Bate, 1859

Material: St. 1 (1♂, 630 m., 09.06.1996); St. 10 (1♀, 38-65 m., 07.11.1997); St. 15 (4♂, 55 m., 14.05.1990)

**Galathea squamifera** Leach, 1814

Material: St. 1 (1♂, 2 m., 05.07.1995); St. 9 (1♀, 18 m., 12.05.1991); St. 15 (1♂, 4.5 m., 20.07.1995)

**Galathea intermedia** Liljeborg, 1851

Material: St. 9 (5♀, 12.05.1991, 2 ovigerous ♀); St. 10 (3♀, 1♂, 40-60 m., 07.11.1997, 2 ovigerous ♀); St. 15 (32♀, 12♂, 55 m., 14.05.1990, 24 ovigerous ♀)

**Galathea bolivari** Zariquiey Álvarez, 1950

Material: St. 1 (1♀, 2 m., 05.07.1995); St. 7 (1♀, 1♂, 0-4 m., 06.07.1995); St. 9 (1♀, 12.05.1991); St. 10 (0-1 m., 14.06.1995, 1 ovigerous ♀; 1♂, 0.5 m., 07.07.1995; 1♂, 1.5 m., 20.09.1995); St. 11 (3♀, 2♂, 0-2.5 m., 20.09.1995); St. 15 (4♀, 5♂, 4.5 m., 20.07.1995, 1 ovigerous ♀); St. 16 (32♀, 3♂, 1.5-4 m., 20.07.1995, 2 ovigerous ♀)

**Galathea cenarroi** (Zariquiey Álvarez, 1968)

Material: St. 9 (1♀, 18.06.1991); St. 11 (3♀, 1♂, 1 m., 20.09.1995,2 ovigerous ♀); St. 12 (3♀, 2♂, 0-1 m., 22.06.1995)

This species is known from the Mediterranean Sea (19), and has also been recorded by Koukouras et al. (17) from the Aegean coasts.

G. cenarroi is recorded for the first time from the Turkish coasts.

**Munida tenuimana** G.O. Sars, 1872

Material: St. 1 (8♀, 6♂, 630 m., 09.06.1996)

This species has been reported by Ostroumoff (11) from the Marmara Sea and by Koukouras et al. (17) from the Aegean coasts.

M. tenuimana is a new record from the Aegean coasts of Turkey.
Munida rutilanti Zariquiey Álvarez, 1952

Material: St. 4 (1♀, 80 m., 03.09.1992); St. 5 (8♀, 8♂, 320 m., 13.05.1991); St. 15 (4♀, 320 m., 31.08.1998); St. 16 (6♀, 8♂, 240 m., 14.09.1990; 16♀, 6♂, 240 m., 15.05.1990; 4♀, 9♂, 230-244 m., 23.05.1991, 1 ovigerous ♀)

Munida intermedia A. Milne-Edwards and Bouvier, 1899

Material: St. 1 (1♂, 520 m., 19.08.1987)

FAM: PORCELLANIDAE

Porcellana platycheles (Pennant, 1777)

Material: St. 1 (1♀, 2 m., 05.07.1995); St. 2 (2♀, 3♂, 0-1 m., 05.07.1995); St. 7 (1♀, 2♂, 0-0.5 m., 06.07.1995); St. 10 (2♀, 0.5 m., 03.03.1994; 9♀, 8♂, 0-1 m., 14.06.1995; 1♂, 1m., 20.09.1995); St. 11 (3♀, 2♂, 0-1 m., 20.09.1995); St. 17 (1♂, 0.6 m., 21.07.1995)

Pisidia bluteli (Risso, 1816)

Material: St. 1 (17♀, 1.5-2 m., 05.07.1995, 13 ovigerous ♀; 1♀, 4 m., 22.07.1996); St. 2 (8♀, 3♂, 0-1 m., 05.07.1995); St. 7 (8♀, 3♂, 0-0.5 m., 06.07.1995, 2 ovigerous ♀); St. 8 (4♀, 1♂, 0-1 m., 07.07.1995); St. 9 (4♀, 18.06.1991, 3 ovigerous ♀; St. 10 (7♀, 7♂, 0-1 m., 14.06.1995, 1 ovigerous ♀; 16♀, 0-0.5 m., 07.07.1995, 4 ovigerous ♀; 4♀, 1 m., 20.09.1995); St. 11 (28♀, 0-1 m., 20.09.1995); St. 15 (2♀, 4.5 m., 20.07.1995); St. 17 (5♀, 3♂, 1 m., 21.07.1995)

Pisidia longimana (Risso, 1816)

Material: St. 1 (7♀, 2 m., 05.07.1995, 4 ovigerous ♀); St. 2 (5♀, 0-1 m. 05.07.1995); St. 3 (44♀, 33♂, 7 m., 22.10.1997); St. 7 (30♀, 3♂, 0-4 m., 06.07.1995, 3 ovigerous ♀); St. 9 (18.06.1991, 3 ovigerous ♀); St. 10 (2♀, 0.5 m., 03.03.1994, 1 ovigerous ♀; 10♀, 0-1 m., 14.06.1995, 5 ovigerous ♀; 6♀, 3♂, 0-0.5 m., 07.07.1995, 1 ovigerous ♀); St. 11 (3♀, 3♂, 0.5-2.5 m., 20.09.1995); St. 15 (11♀, 4.5 m., 20.07.1995); St. 16 (6♀, 2♂, 1.5 m., 20.07.1995, 4 ovigerous ♀); St. 17 (2♀, 1♂, 0-1 m., 21.07.1995)

This species has been reported by Ostroumoff (11) as Porcellena Rissoi from the Marmara Sea. It has also been reported from all of the Turkish coasts (7,8,11,14,16).

Discussion

In this study, 28 Anomuran species were identified, 6 of which belong to the Diogenidae, 10 to the Paguridae, 9 to the Galatheidae and 3 to Porcellanidae (Table).

Five species (G. naxa, G. cenarroi, M. tenuimama, P. chevreuxi and P. syrtensis) are new records for the Aegean coasts of Turkey, and 3 species (P. chevreuxi, P. syrtensis, G. cenarroi) are new records for the Turkish coasts.

Ecological distributions of the species show that P. eremita, P. syrtensis, D. pugilator and P. forbesii occur only in sandy biotopes; P. alatus, P. prideaux, M. tenuimama, M. intermedia and G. naxa only in muddy biotopes; A. petiti and A. bicorneriger in sandy-muddy biotopes; and C. tubularis and P. cuanensis in biotopes with Posidonia. Other species have been observed in various biotopes.

As a result of studies carried out in order to review the Anomuran fauna of the Turkish seas and the distribution of species (Table), it was determined that 3 species were reported from the Black Sea, 20 species from the Sea of Marmara, 32 species from the Aegean coasts of Turkey, and 17 species from the Turkish Mediterranean, indicating the presence of 35 Anomuran species inhabiting the Turkish seas in general.

Koukouras et al. (17) reported 35 Anomuran species from the Aegean coasts, which seems to be in accordance with the 32 species known from the Turkish Aegean coasts. Consequently, it is clear that the majority of studies conducted along the Turkish coasts over the century were based mainly on inshore samplings. Examination of the bathymetrical distributions of 107 species reported from European seas (18) reveals that a significant proportion of species hitherto unrecorded from Turkish coasts are deep-sea dwellers. Therefore, it is believed that deep-sea samplings in Turkish seas and more detailed examinations along the Turkish Mediterranean will result in a more accurate count Anomuran species.
